Cabinet Care

WHAT TO AVOID

- Wipe your cabinets with a clean, soft, lint-free cloth.
- Use warm water or a mild dishwashing liquid mixed with warm water.
- Ensure spills and splatters are wiped immediately to avoid staining. Prolonged exposure can create discoloration or damage to the finish.
- Always dry surfaces thoroughly once you are done cleaning.
- Wash and polish your cabinets once or twice a year using a coat of high quality, oil-based furniture polish. An emulsion-type clear polish is recommended. Do not use wax-based products as this causes buildup on the cabinet surface.
- Avoid exposure to high heat sources. To avoid damage, we recommend removing cabinet doors and drawers near self-cleaning ovens during cleaning cycles.
- For glass door fronts, use ammonia-free sprays, and spray directly on cleaning cloth to avoid spraying cabinet.

CABINET CARE TIPS

- Don't use harsh detergents, strong soaps, abrasive cleaning products, scouring powder, scouring pads or other harsh abrasives.
- Don't not use spray polishes containing silicone or petroleum solvents.
- Don't use products that contain ammonia.
- Don't use bleach or products containing bleach.
- Don't use your dishcloth or sponge to clean and dry cabinets as this may contain grease or particles that can damage the finish.
- Don't mount or place heat-producing appliances beneath cabinets due to excess heat and moisture exposure. If you notice moisture buildup, wipe dry immediately.
- Don't use brass and silver polishes on hardware. These polishes contain harsh chemicals that can damage the finish of the cabinet.
